Capture | Cameras

**Performer**

Who is wearing the calibration suit.

Noah — Suit A

**Motion model**

How much work the AI does between suit markers.

Balanced — suit leads, AI fills gaps

**Smoothing**

Higher values remove jitter but soften fast moves.

1.0×

**Capture these too**

- [ ] Hands and fingers
- [ ] Face
- [ ] Lock feet to the floor

These apply to new recordings only. **You can change this later** — nothing here is locked in once you hit record.

**Start recording**

# Settings

**Saved devices**
Suits, gloves and cameras

**Scene calibration**
Floor, volume and markers

**API and integrations**
Keys, webhooks, engines

**Accessibility**
Motion, sound, text spacing

## Accessibility

Tune how the app looks, moves and sounds. Changes apply to every screen.

### Motion

**Interface animation**

Reduced keeps things in place and removes sliding and easing.

Full

Freeze the 3D viewport until I press play

### Sound

Tone at the start and end of a take

Sound on errors and disconnections

**Cue volume** 70%

### Text and spacing

**Text size**

Applies to every screen, not just this one.

Small | **Default** | Large | Extra large

**Letter spacing** 0.00em

**Word spacing**

Widens the gap between words without stretching the line.

0.05em

**Line height** 1.6

Always underline links

**Preview**

**Sprint Cycle — Take 04**

Recorded from Suit A with four cameras. The AI filled in the forearms and head where the suit has no sensor.

**You can change this later** — every setting here can be adjusted at any time, and nothing you have recorded is affected.
